Welcome!

I'm Andy Patel, President of Closet Outlet, and I share a common goal with Lee Goldsticker, Designer/Inventor and Founder of Lazy Lee, LLC: To deliver exceptional closet and storage products that:

- are unique;
- optimize use of available space;
- require little, if any care; and
- are safe even at extreme load-bearing levels.

Together, Lee and I are proud to introduce you to an opportunity that will surely be a win-win for us all: Lee's unique product designs, Closet Outlet's mass manufacturing capability and your salesmanship. Together, we have the potential to generate considerable success.

This multi-purpose Design & Specifications Guide will:

- educate you about the Lazy Lee product line;
- introduce you to the new patent-pending Lazy Lee Stabilization System;
- aid you when educating your prospects and clients;
- support your efforts when selling these products.

Let's get started!

CLOSET OUTLET

ABOUT LAZY LEE® PRODUCTS

Before we can share our exciting Lazy Lee product line with you, it's important that you understand its foundation, so let's begin by describing the patent-pending Lazy Lee® Stabilizing System™ that enables our revolving storage products to operate.

Powered by ROTAS™

There are two important components that make Lazy Lee's Revolving Storage Products unique—the patent-pending Lazy Lee® Stabilizing System™ itself, and its key component: the ROTAS Bearing Assembly. These, together with a few other parts, enable Lazy Lee® products to rotate smoothly, quietly, and safely. And, they require no maintenance. Ever.

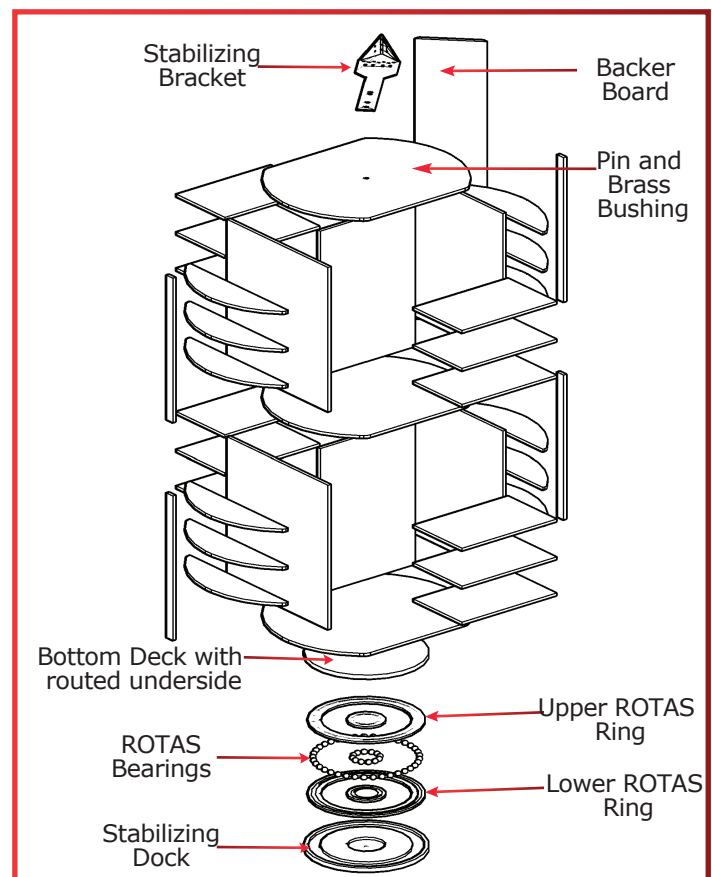

NEW Lazy Lee Patent-Pending Stabilizing System

A Lazy Lee® Stabilizing System (right) consists of the following:

- Stabilizing Bracket – secures modules
- Pin & Brass Bushing – for Pinned installations
- ROTAS Bearing Assembly – smooth, silent, safe rotation
- Backer Board – sweeps fallen items forward
- Stabilizing Dock (1) – secures Stabilizing System to floor

Above: ROTAS Bearing Assembly consists of two solid-surface rings, each with a routed channel on one side. A series of solid surface balls is sandwiched between the channeled sides of the rings.

ABOUT LAZY LEE® PRODUCTS (continued)

Anti-Tip and Anti-Pinch Features

Shown below is an illustration of the Anti-Tip and Anti-Pinch features of the Lazy Lee® Stabilizing System. The original ROTAS™ Bearing Assembly, as described on the previous page, is now enclosed between two additional routed components:

- Each Lazy Lee® Stabilizing System includes one Stabilizing Dock. When you purchase storage modules from us, the bottom deck is manufactured with its underside pre-routed to form an upper stabilizing dock. When the ROTAS™ Bearing Assembly is placed between the pre-routed bottom deck and the Stabilizing Dock, function is maintained, intrusion of dust and dirt is minimized, and fingers and pets are protected.

Sandwiching a ROTAS Bearings Assembly between the pre-routed unit's deck and the new Stabilizing Dock seals the bearing assembly between them, improving function and safety.

Bottom Stabilizing Dock

Pre-routed underside of Lazy Lee unit's deck functions as an upper stabilizing dock for the ROTAS Bearing Assembly.

- Lazy Lee Stabilizing Systems are also sold separately. If you wish to design your own revolving storage units, you may use our Stabilizing System as a foundation. And if you wish to enclose your ROTAS Bearings Assembly, you may either purchase an additional Stabilizing Dock, or pre-rout the bottom deck of your design, just as we have done with ours, to create your own upper stabilizing dock.

ANTI-TIP

Load-bearing of up to 6000 lbs.
Max. footprint: 42" diameter
Max. height: up to 10'

FREESTANDING

Enables standalone units to be placed anywhere without need for enclosure.
Unrestricted design opportunities.

ANTI-PINCH

Safe near people and pets when: ROTAS is sandwiched between 2 Stabilizing Docks; or between a bottom deck with a routed channel and the Stabilizing Dock provided.

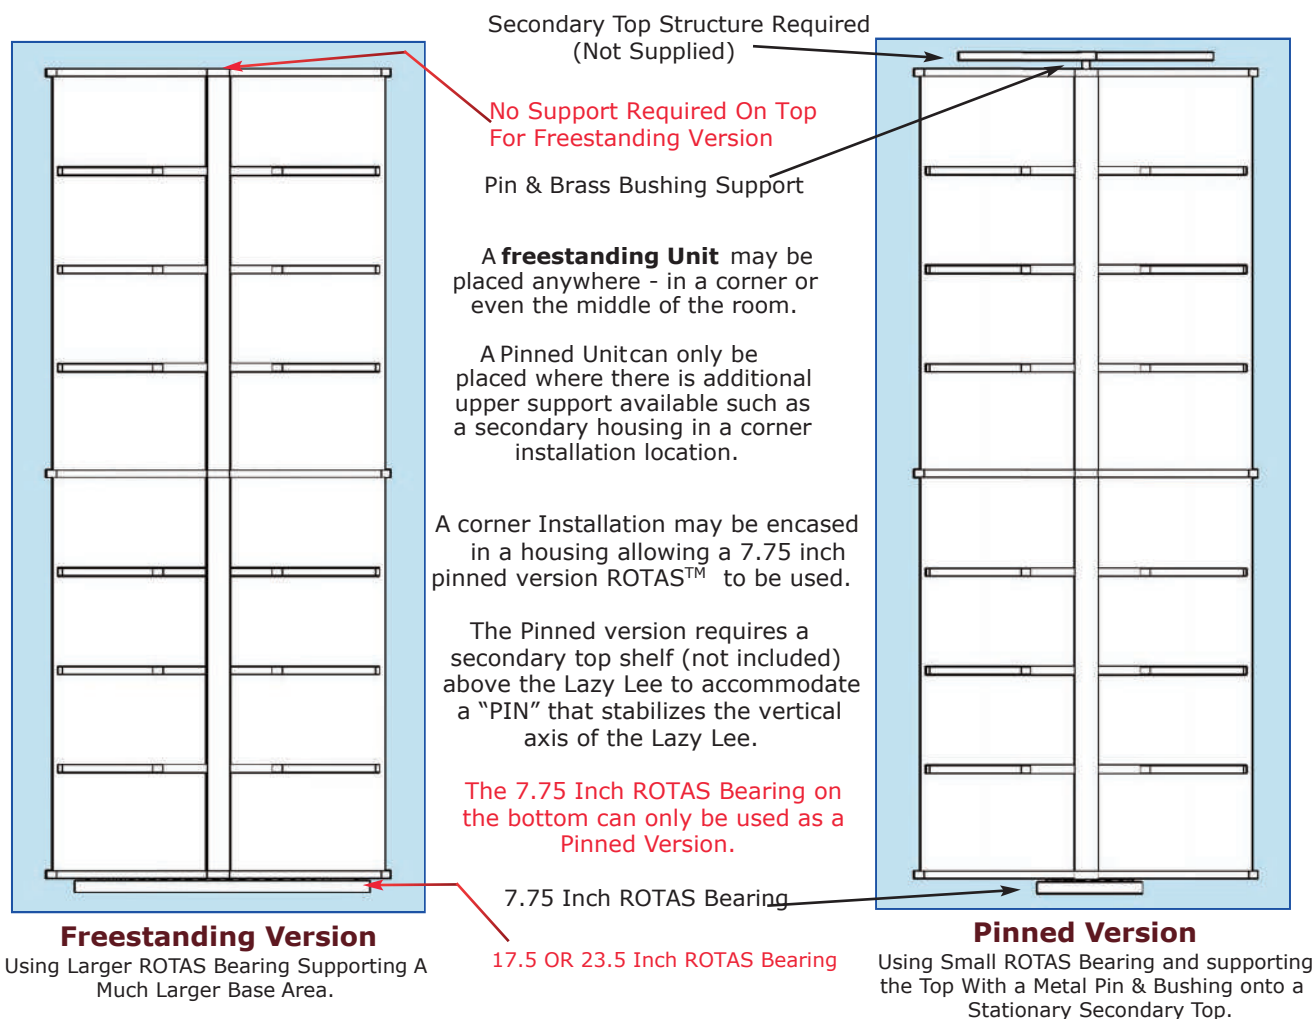

ABOUT LAZY LEE® PRODUCTS (continued)

Freestanding vs. Pinned Lazy Lee Storage Units

In the drawings below, you'll see the difference between a Freestanding unit and a Pinned unit.

Note: Freestanding units require a larger diameter Lazy Lee Stabilizing System.

Pinned Units are installed in an enclosed setting, such as a closet or pantry niche, where additional upper support is available.

Freestanding Units are virtually limitless when it comes to placement: They are designed to be beautiful, convenient, and safe, and make an attractive addition to most any decor.

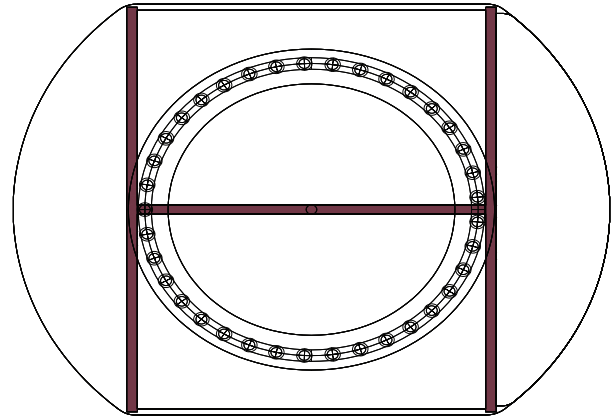

Perhaps the most noteworthy difference is that Pinned units may be built upon a 7.75" Lazy Lee Stabilizing System, thus the cost of the ROTAS Bearing Assembly is a bit lower.

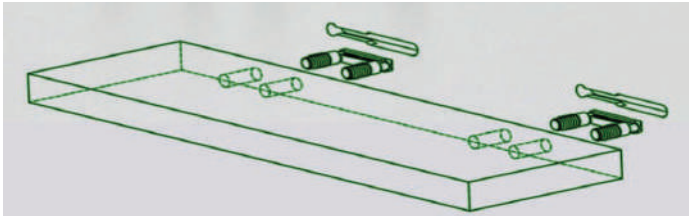

ABOUT LAZY LEE® PRODUCTS (continued)

"H-on-a-Circle" Core

All Lazy Lee® Revolving Storage products have a core design known as the H-on-a-Circle. Because there is no vertical axis within the unit's core, the cross brace of the "H" may be positioned off center, if desired, to create larger shelf space on one side, smaller on the other. This very versatile design feature, together with adjustable shelving, allows for considerable creativity in planning how to store oddly shaped or unusual items.

Fastener System & Construction Method

How LockDowel Fasteners Work

Lazy Lee® Revolving Storage designs are assembled with Lockdowel Fasteners. These patent-pending state-of-the-art fasteners require no glue, screws or nails. In fact, the fasteners are totally invisible when the unit is fully assembled. The only "tool" needed to assemble a Lazy Lee module is a rubber mallet.

Electronic Pricing Guide (EPG): An Overview

Your welcome kit also includes an Excel document with a page for each of the 62 standard SKUs that Closet Outlet produces. Each Item Number shown in this Guide is cross-referenced with the EPG. When you access the EPG page, you'll see all the information you need: height, number of shelves, half-moons, laminate color choices, and prices for all the variables. The EPG is meant to be used together with this Guide, so that you may confidently select Lazy Lee Storage Products that align with clients' and prospects' wants and needs.

LAZY LEE DESIGN COLLECTIONS

Overview

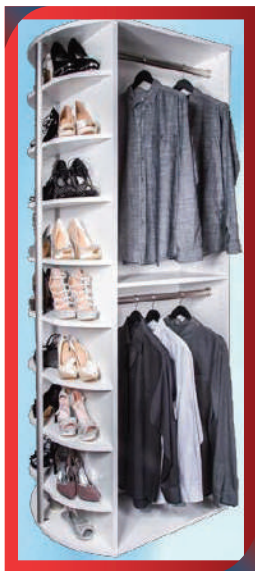

The Lazy Lee® Revolving Storage product line consists of five Collections. Each Collection is defined by the diameter of the ROTAS™ Bearings Assembly in its Lazy Lee Stabilizing System:

Collection	ROTAS Bearing Assembly	Suitable for:	Notes
Any	7.75" diameter	Pinned Units	Any Lazy Lee Revolving Storage Unit may be installed as a Pinned unit
Petite	17.5" diameter	27.5" Freestanding Units	
Boutique	17.5" diameter	29" Freestanding Units	
Elite	23.5" diameter	35" Freestanding Units	
Elite Plus	23.5" diameter	38.5" Freestanding Units	
Ultimate	23.5" diameter	42" Freestanding Units	

There are four basic Lazy Lee® product modules that offer key characteristics, allowing each unit to customized based on customer needs and available square footage:

A Woman's Dream
Designed for a collection of shoes, this unit stores upto 200 pairs, depending on shoe size and unit size.

The Double-Hang
Ideal for men's or women's tops and bottoms, with additional storage variety.

The Valet
Designed for use by women or men, this unit features drawers, hanging space, and shoe storage.

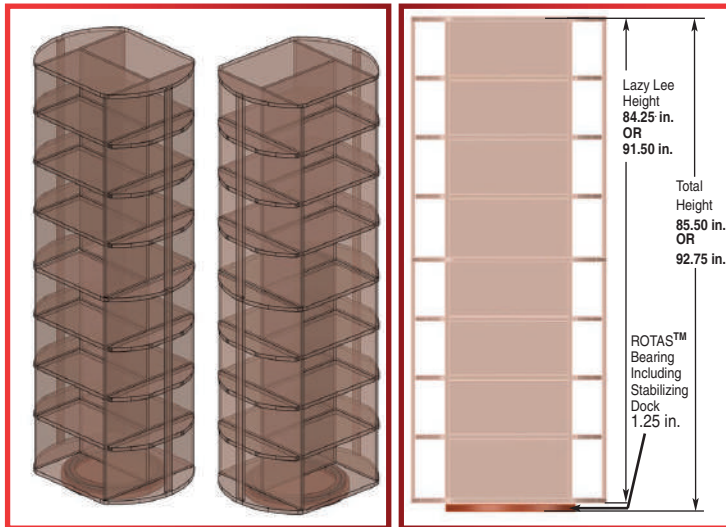

The Pantry
For packaged foods, bottled items, kitchen and cleaning items. Chrome rails protect items from sliding off shelves.

ABOUT LAZY LEE® PRODUCTS (continued)

Revolving Storage Unit Specifications: Standard Configurations

Unit Height	84.5" or 91.5"
Material	White melamine
Revolution	Free Revolving - 360°
Rectangular Shelves	16 (When Assembled)
Half-Moon Shelves	16 (When Assembled)
Diameters available	27.5", 29", 35", 38.5", 42"

Because the diameter of each unit defines the Collection into which it fits, you and your customer will select the size and color first, then whether it will be a **Pinned** or **Freestanding installation**, and the kind(s) of items to be stored.

Finally, select desired features: 360°

Height increase	Mirror-Ready
Full Length Hang	Height decrease
Single Half-Hang	Number of drawers
Double Half-Hang	Number of doors
Gun Rack	Slat Wall

ROTAS™ Bearing Assembly Choices

7.75 inches Pinned ROTAS - Includes: Metal Pin, Brass Bushing & Stabilizing Dock. When using a Pinned ROTAS, a secondary top shelf is required. The Stabilizing Pin and Brass Bushing anchor the Lazy Lee Revolving unit to the secondary top shelf.

17.5 inches Freestanding ROTAS - Including: Stabilizing Dock The freestanding ROTAS may be placed anywhere, even on low pile carpet. The ROTAS Bearing Assemblies installed on Lazy Lee storage units have been tested to perform well at load-bearing weights up to 6,000 lbs. The Combination of the ROTAS and the Lazy Lee unit will perform with uneven weight loading on it.

Unit Numbers shown are cross-referenced to the Electronic Pricing Guide (EPG).
